

AquaCare T65

NEW

WATER DEMINERALIZATION CARTRIDGE

- ▶ For use with fill water when diluting Nu-Calgon glycols or other hydronic treatment
- ▶ Economical and convenient option to pre-blended glycol formulas
- ▶ Using high quality water extends life of the glycol in the system
- ▶ Demineralized water meets strict water quality requirements by OEMs
- ▶ Removes chloride, sulphate and nitrite ions which attack system metals
- ▶ Removes scale forming ions that damage components and block heat transfer
- ▶ Lowers water conductivity which reduces internal corrosion
- ▶ Media changes from blue to beige when resin is spent
- ▶ Disposable, billable to the job

PART #: 4122-01

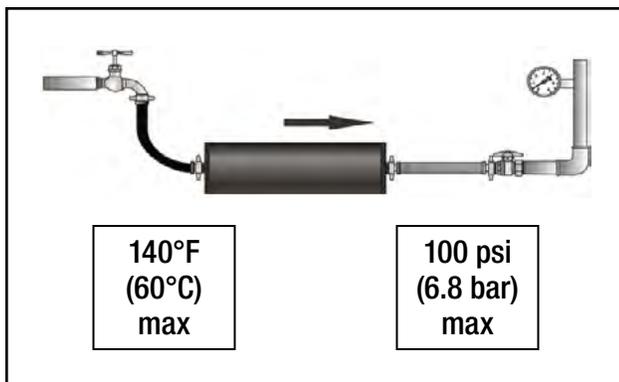

Figure illustrates usage of the cartridge at the jobsite

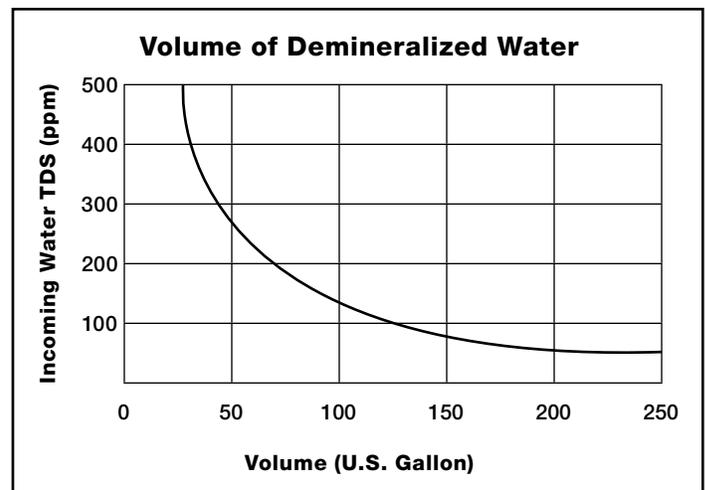

Chart shows capacity of AquaCare T65 cartridge based on incoming water quality. Device has a nominal capacity of 65 gallons at 200 ppm TDS
